

## Bias bounties are one of many forms of structured public feedback

### Evaluations

Small group technical deep dive into narrowly scoped issues.

- Highlighting and providing in-depth expertise and analysis on a specific issue
- Technical demonstration of how AI can create impacts “in silico”

### Bias Bounties

Open challenges for narrowly scoped issues.

- Testing framework and construct validity
- Providing deep expertise
- Crowdsourcing answers to a specific problem to improve diversity of feedback

### Expert Red-Teaming

Small group assessments by invited experts in non-technology fields.

- Testing narrow harms and point issues
- Supplementing internal red teaming efforts with external expertise (e.g., medical, legal)

### Public Red-Teaming

At-scale challenges conducted by invitation or fully open to a wide range of individuals with unique expertise.

- Diffuse harms
- Gathering data en-masse to identify systemic issues vs point issues
